(945) 225-4518 | ghimirep175@gmail.com | [linkedin.com/in/pawan-ghimire-633a75235](https://www.linkedin.com/in/pawan-ghimire-633a75235)

PROFESSIONAL SUMMARY

Senior Software Engineer with a strong background in Java, Spring Boot microservices, REST APIs, and cloud-native systems. Experienced in building scalable backend platforms and modern frontends, with hands-on work at Walmart Global Tech on POS Analytics dashboards and GCP-based microservices, plus a 30% reduction in query execution time through SQL and JPA tuning. Also delivered legacy-to-microservices modernization and expanded automated test coverage at Paychex using Playwright, Selenium, and CI/CD pipelines. Focused on using deep engineering, automation, and performance optimization skills to improve reliability, speed up delivery, and support business growth.

TECHNICAL SKILLS

Core Java & Concepts:	Java (8/11/17), Multithreading, Java Streams, Lambda Expressions, SOLID Principles, Design Patterns, Dependency Injection, Inversion of Control (IoC), JavaScript, TypeScript, SQL
Frameworks & Backend:	Spring Boot, Spring MVC, Spring Security, Spring Data JPA, JPA, Hibernate, Microservices, REST APIs, GraphQL, API Development, Drools Rule Engine
Cloud & DevOps:	AWS, GCP (Google Cloud Platform), Cloud-Native Architecture, Docker, Kubernetes, CI/CD, GitHub Actions, Jenkins, Maven, Gradle, Git, GitHub
Data Streams & Caching:	Apache Kafka, Redis, Memcached, BigQuery, Relational Databases, SQL Optimization, Performance Tuning
Testing & QA:	JUnit 5, Mockito, Unit Testing, Integration Testing, Automated E2E Testing, Selenium WebDriver, Playwright, TestNG
Frontend Technologies:	Angular (2+), React, Redux, HTML5, CSS3/SASS
Methodologies & Support:	Agile/Scrum, SDLC, Code Review, Production Support, Root-Cause Analysis, ServiceNow, Active Directory, Postman, JIRA, Confluence, Linux, Windows Server

PROFESSIONAL EXPERIENCE

Walmart Global Tech — Senior Software Engineer

Oct 2024 – Present | Bentonville, AR

- Architect, develop, and maintain Java Spring Boot microservices and React dashboards using Redux for state management on Linux, delivering real-time POS device health monitoring that speeds issue detection.
- Designed cloud-native architectures utilizing GCP (Google Cloud Platform) services to scale microservices dynamic workloads, improving system reliability and resource efficiency across cloud infrastructure.
- Optimized backend database interactions using SQL Optimization, Spring Data JPA tuning, and Java Streams, resulting in a 30% reduction in query execution time on high-traffic data pipelines.
- Strengthened release quality by establishing automated unit and integration testing pipelines with JUnit 5 and Mockito, leveraging GitHub Actions CI/CD workflows for seamless deployment validation.
- Architected and implemented robust E2E UI automation testing frameworks utilizing Selenium WebDriver, Playwright, and Java, increasing overall functional test coverage by 35% and reducing manual regression testing cycles.
- Support distributed event-driven microservices architecture using Kafka topics and consumer groups to ensure reliable asynchronous communication with zero data loss across services.
- Incorporate advanced Redis and Memcache caching layers within microservice endpoints to mitigate database strain, dropping core application API latency by 22%.
- Utilize BigQuery and SQL data analytics to audit large system logs, isolate transaction anomalies, and resolve intricate microservice environmental bottlenecks.
- Configure rules within the Drools Rule Engine to establish decisiontree logic and configurable application workflows.

Paychex — Full Stack Developer

Sep 2023 – Oct 2024 | Rochester, NY

- Delivered tier-3 application support and critical backend code patches for internal corporate microservices using Java, Spring, SQL, and Linux, preserving 99.9% operational uptime.
- Leveraged AWS EC2, S3, and CloudWatch to deploy, monitor, and host backend microservices and modern single-page applications, improving deployment speed and system availability.

- Refactored legacy monolithic services into Spring Boot microservices incorporating SOLID principles, Inversion of Control (IoC), and modular design patterns to increase code maintainability.
- Accelerated software delivery by configuring GitHub Actions and Maven/Gradle build automation tools to standardize continuous integration and testing across team branches.
- Expanded test automation coverage across critical enterprise workflows by authoring automated UI and regression test scripts using Playwright and Selenium WebDriver.
- Isolated and resolved core UI layout, state management, and service-level defects across enterprise Angular and JavaScript applications using TypeScript, Postman API tracking, and systematic log analysis.
- Facilitated zero-downtime CI/CD deployment pipelines, environment variables configuration, and secure code branching strategies via Git and GitHub.
- Conducted root-cause analysis of recurring performance issues on Windows Server and Linux platforms, identified key bottlenecks, and applied fixes that improved system response time and reduced downtime.

WorldLink Communications — Full Stack Developer
Mar 2018 – May 2022 | Nepal

- Designed, built, and maintained localized web applications, microservices, and customer-facing portal tools using Angular, JavaScript, core Java, and relational databases, which streamlined user workflows and reduced page-load times.
- Developed secure API endpoints using Spring MVC, Spring Security, and Hibernate/JPA, implementing authentication, authorization, and data mapping logic, which protected sensitive data and enabled safe client integrations.
- Applied multithreading techniques with Java ExecutorService and Lambda expressions to process background tasks and batch updates concurrently, which lowered processing latency and improved overall system throughput.
- Collaborated with networking teams to build internally-facing software solutions that automated monitoring of TCP/IP parameters, enterprise VPN tunnels, and hardware health metrics.
- Managed end-to-end environment deployment pipelines via Git and GitHub, ensuring reliable local testing setups and clean code-branching execution.

EDUCATION

Webster University — Master's Degree, Cyber Security	2023
University of Bedfordshire — Bachelor's Degree, Software Engineering	2021
